- » Accessible in real-time
- » Mobile APP manageable and viewable
- » Auto-naming of addresses in the logbook
- » Secure
- » Suitable for hourly/per Km consultants

WE ALL know the saying about the only two certainties in life: death and taxes. ~ *financialmail.com*

Well, as far as I know, there is no app or gadget that will truly improve the former, but a GPS Logbook device is bound to make doing your taxes a swifter, more streamlined affair.

Having a cigarette lighter GPS unit is irritating, inaccurate, subject to environmental conditions, in the way, and overall a clumsy solution. Introducing the fixed installed iTrace Black Marlin solution.

GPS Logbook functionality using the Black Marlin means never having to plug or unplug anything, instead the Black Marlin automatically uploads GPS data required to produce the logbook automatically and continuously via the GSM network, at no additional cost! No possibility of losing data, or filling up memory to its limit.

Unlike ANY OTHER logbook service the iTrace Pro service includes a FREE mobile APP (Android and Apple IOS) and gives the user the ability to track his vehicle LIVE on a map every 10 seconds, including real-time access to past trips logged in the palm of your hand. Your live location information and services as well as your logbook entries are automatically available on one or more mobile APPs at a time (no limit) as well as accessible via our website.

iTrace's Black Marlin GPS and associated iTrace PRO service is the lowest price offering of any automated and live GPS service available, and at a price that the user is willing to pay for logbooks alone. Comparable providers of similar services are independently discussed and listed here: ~ *wheelswrite.com*
